Empathy Map Canvas:

The Empathy Map Canvas for the “Calculating Family Expenses using ServiceNow” project helps understand the needs, emotions, and challenges of the end users — mainly family members who manage monthly budgets and track household expenses. It focuses on how users think, feel, say, and do when handling their finances. Users often think about maintaining financial stability, saving money, and reducing unnecessary expenses. They feel anxious or stressed when expenses exceed income or when they cannot track their spending efficiently. They say they want a simple, automated system to record and analyze expenses without manual effort. They do tasks such as noting daily expenses, categorizing them (like food, utilities, and education), and checking reports manually.

Through this empathy mapping, the development team gains deeper insight into user expectations and pain points. The users hear advice from family, financial experts, or social media about managing expenses better, and they see others using automated digital tools for the same purpose. Their pains include difficulty in manual calculations, lack of time, and errors in tracking. Their gains include clear visualization of monthly expenses, automated alerts for overspending, and an easy-to-use dashboard built on ServiceNow. By empathizing with users’ real-life struggles, this canvas ensures the ServiceNow solution is designed to be user-friendly, automated, and helpful in achieving financial awareness and control for families.
