

Date	2/11/2025
Time id	NM2025TMID07789
Project name	Calculating Family Expenses Using Service Now
Maximum mark	4 marks

Solution requirements (functional and non-functional)

Functional Requirements

Requirement	Description
User Authentication	The system should allow users to securely log in using their ServiceNow credentials to access their family expense data.
Expense Entry Module	Users should be able to add daily, weekly, or monthly expenses with categories such as food, rent, utilities, education, etc.
Expense Categorization	The system should automatically categorize expenses based on user input or predefined templates.
Budget Allocation	Users can set monthly or yearly budgets for each category to monitor their spending limits.
Expense Dashboard	The dashboard should display visual charts (pie or bar charts) showing spending distribution and total expenses.
Expense Reports	The system should generate downloadable reports (PDF/Excel) summarizing family expenses over selected periods.
Notifications and Alerts	Alerts should notify users when expenses exceed set budgets or when a bill payment is due.

Non-Functional Requirements

S.No	Requirement	Description
1	Performance	The system should process and display expense data within 3 seconds for optimal user experience.
2	Scalability	All sensitive data (like user credentials and expense details) must be encrypted and protected using ServiceNow's security framework.
3	Reliability	The system should support multiple family members and handle growing expense data without performance degradation.
4	Usability	The interface should be intuitive, user-friendly, and accessible to users of all age group
5	Security	The system must ensure high availability with minimal downtime and consistent performance.
6	Maintainability	

S.No	Requirement	Description
		The application should be easily maintainable and allow for future enhancements or module additions.
7	Compatibility	Automatic backups should occur daily to prevent data loss in case of system failure.
