Project name	Calculating Family Expenses Using Service Now
Maximum mark	2 marks

PROJECT DESIGN PHASE

PROBLEM- SOLUTION FIT TEMPLATE

Problem:

Difficulty in manually tracking family income and expenses accurately.

Lack of a centralized system for managing monthly expense data.

Time-consuming calculations leading to budgeting errors.

No proper visualization or reports to analyze spending patterns.

Discussion:

Families often use spreadsheets or notebooks, which can be error-prone.

Manual updates make it hard to monitor daily or weekly expenses.

The absence of automation leads to inconsistent financial planning.

Integration of automation tools like ServiceNow can simplify the process.

Ideas:

Develop a ServiceNow application for automated expense recording.

Create dashboards to display monthly and yearly expense summaries.

Set up notifications and reminders for due bills or overspending.

Use categories like food, rent, utilities, and savings for better tracking.

Solutions:

Implement a “Family Expense Management” module in ServiceNow.

Enable users to input and categorize expenses with automated calculations.

Generate reports and analytics through ServiceNow dashboards.

Integrate data visualization tools for better decision-making.

Expected Results:

Simplified and accurate family expense management process.

Reduced manual errors through automation and centralized tracking.

Improved financial awareness with visual dashboards and reports.

Enhanced budgeting and savings through real-time monitoring.
