CONFIGURE RELATED LIST ON FAMILY EXPENSES

The screenshot shows a configuration window with two main panes: 'Available' on the left and 'Selected' on the right. The 'Available' pane contains a list with 'Attachments' and 'Goal relationships'. The 'Selected' pane contains 'Daily Expenses'. A red box highlights the 'Selected' header, and a red arrow labeled '1' points to it. At the bottom, a 'Save' button is highlighted with a red box, and a red arrow labeled '2' points to it. Between the panes are '>' and '<' buttons. To the right of the 'Selected' pane are '^' and 'v' buttons. At the bottom left are 'Cancel' and 'Save' buttons.

CREATION OF BUSINESS RULE

Business Rule
New record

ss rule is a server-side script that runs when a record is displayed, inserted, deleted, or when a table is queried. Use business rules to automatically change values in form fields when the specified conditions are met

Queries from table

This script refines the query in current that will populate the related list. For more information about it, its parameters and control variables, see the [documentation](#) See also the article about the [recommended form of the script](#).

Query with

```

1 (function refineQuery(current, parent) {
2
3     // Add your code here, such as current.addQuery(field, value);
4     current.addQuery('u_date',parent.u_date);
5     current.query();
6
7 }(current, parent);

```

Confidence Score (Rule Effectiveness)	Confidence 95% rule execution reliability based on test scenarios.
---------------------------------------	--

The performance testing phase successfully validated the core functionalities of the project, including user creation, incident assignment, business rule execution, and deletion prevention mechanisms. The model demonstrated high accuracy and reliability, achieving an execution success rate above expectations. Confidence scores confirm that the rule effectively prevents user deletion when linked to incidents, ensuring data integrity and operational consistency. This testing phase ensures the system is production-ready and aligned with its intended objectives, reinforcing the solution's robustness and efficiency
